## Interface Design and Development

## Lecture 8 – API 2 & Pagination

2022 – Semester 1

1

### Content

---

- RESTful API Example
- Pagination with Client-Side Data

2

## An RESTful API Example Application

---

In this example, we can read/insert/update/delete data in database tables in VueJs through a representational state transfer application programming interfaces (RESTful API).

The backend:

- Create the database table
- Write server side scripting to query the database and handle the GET/POST/PUT/DELETE requests

The front end (we focus on the front end)

- Send requests
- Display the data and error messages

You can download the sample code from Canvas.

## Content

---

- RESTful API Example

- Pagination with Client-Side Data

4

## Pagination with Client-Side Data

- Uses *vuejs-paginate* to implement pagination
- Requires that the entire data is stored in memory as an array/object
- Needs a custom filter to remove the part of the array that is not to be displayed
- Requires `<paginate>` element to show the pagination links

5

## Pagination with Client-Side Data

- *vuejs-paginate*: A Vue.js component to make pagination.
- How to reference it?
  - Download to local  
`<script src="js/vuejs-paginate.js"></script>`
  - CDN  
`<script src="https://unpkg.com/vuejs-paginate-next@latest/dist/vuejs-paginate-next.umd.js"></script>`
- How to create *paginate* component in Vue?

```
components: {  
    paginate: VuejsPaginateNext,  
}
```

6 - Interface Design and Development, © Swinburne

6

## Vuejs-paginate configuration

```
<paginate
  :page-count= "12"
  :page-range= "5"
  :margin-pages="1"
  :click-handler="clickCallback"
  :prev-text=" 'Prev Page' "
  :next-text="'Next Page' "
  :container-class="'pagination' "
  :page-class="'page-item' "
  :active-class="'currentPage' " >
</paginate>
```

N.B. The attributes used above are examples of some of the many attributes available for vuejs-paginate library.

## Vuejs-paginate configuration

```
<paginate
  :page-count= "12"
  :page-range= "5"
  :margin-pages="1"
  :click-handler="clickCallback"
```

:page-count -- Total count of pages. required  
 :page-range -- number of pages displayed, default 3. It is recommended to use an odd number, so that the same number of pages are displayed before and after the active page  
 :margin-pages -- The number of displayed pages for margins. default: 1

8

CSS class name for tag li of each page element.

## Vuejs-paginate configuration

```
<paginate
...
:click-handler="clickCallback"
:prev-text=" 'Prev Page' "
:next-text="'Next Page'"
:container-class="'pagination'"
:page-class="'page-item' "
:active-class="'currentPage'" >
```

**:click-handler** -- The method to call when page clicked. Use clicked page number as parameter.

**:container-class** -- CSS class name for the layout.

**:page-class** -- CSS class name for tag li of each page element.

**:active-class** -- CSS class name for active page element.

## Example: HTML– Table

```
<v-table>
<template v-slot:default>
<thead>
  <tr>
    <th>Code</th>
    <th>Description</th>
    <th>Credit Points</th>
    <th>Type</th>
  </tr>
</thead>
<!-- Using v-for to loop units and list them -->
```

10 - Interface Design and Development, © Swinburne

## Example: HTML– Table

---

```
<tbody>
  <tr v-for="unit in getItem"
:key="unit.code" >
    <td>{{unit.code}}</td>
    <td>{{unit.desc}}</td>
    <td>{{unit.cp}}</td>
    <td>{{unit.type}}</td>
  </tr>
</tbody>
</template>
</v-table>
```

11

## Component – Page Control Methods

---

```
computed:{
  // function that filters the
  units according to the search fields
  filteredUnits: function(){
    return
    this.units.filter(unit=>

    unit.code.toLowerCase().match((this.f
    Unit.code.toLowerCase())) &&
```

12 - Interface Design and Development, © Swinburne

12

## Component – Page Control Methods

```
unit.desc.toLowerCase().match((this.fUnit.desc.toLowerCase())) &&

unit.type.match((this.fUnit.type.trim()))

    );
},
```

13 - Interface Design and Development, © Swinburne

13

## Component – Page Control Methods

```
getItems: function() {
    let current =
this.currentPage * this.perPage;
    let start = current -
this.perPage;
    return
this.filteredUnits.slice(start,
current);
},
```

14 - Interface Design and Development, © Swinburne

14

## Component – Page Control Methods

```
getPageCount: function() {  
    return  
    Math.ceil(this.filteredUnits.length /  
    this.perPage);  
    } },  
methods:{  
    clickCallback: function(pageNum){  
        this.currentPage = Number(pageNum);  
    }  
}
```
